

SHSBG01

User Manual

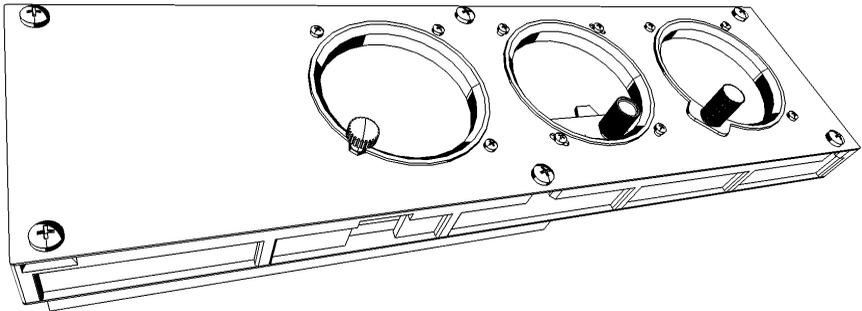

Version 1.1
Aug 8th 2020
SIMiONIC

Overview

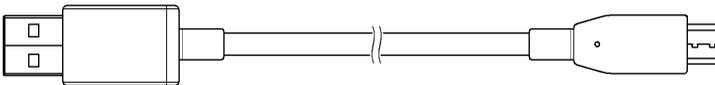

Thanks for choosing products from SIMiONIC. We strive to provide the best quality and realistic hardware for the use of building flight simulators.

This manual includes the spec and usage of the simulated standby gauges suite produced by SIMiONIC which is supposed to be used on flight simulators. The suite includes standby airspeed indicator, attitude indicator and altimeter which is based on an LCD display and packed in Cessna style.

Unpacking

SHSBG01 - The stand by instruments (Cessna style)

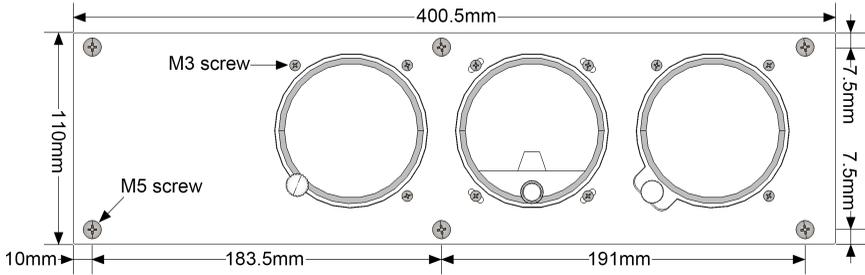

USB Cable

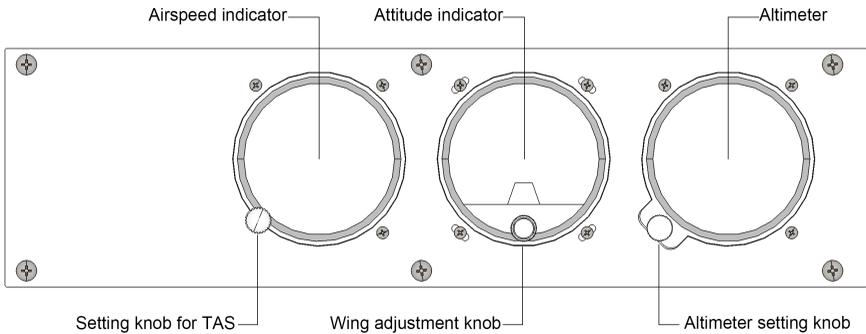

12V/3A AC-DC power adapter

Mounting instructions

Software configuration

1. Connect the standby gauge group to 12V/3A power adapter.
2. Turn on the standby gauge group by confirming the power switch on the back has been turned on.
3. Plug the USB cable to the standby gauge group and PC/Mac.
4. Install driver for STM32 virtual COM. Download link can be found on the download page on our website.
5. The standby gauge group should now be recognized as a serial port in the system.
6. Within the bridge for FSX or X-Plane, select the corresponding serial port in the list for the standby gauges and click button “ConnStby” to connect. If the standby gauges don’t work as expected, click the same button to disconnect the serial port and select another serial port in the list and connect again.

Limited Warranty

- 1. The product is covered by a 1 year limited warranty from the date of purchase, against any defects in materials or workmanship.*
- 2. This limited warranty does not cover any damage, deterioration or malfunction resulting from any improper use.*
- 3. We will repair the product using either new or refurbished replacement parts.*
